

## **ULTRON® VIP NYLON 6,6**

Ultron VIP premium nylon 6,6 fiber redefines advanced soil-fighting technology. Unlike other contract carpet fibers, Ultron VIP nylon features a patented mix of fiber shapes and sizes specifically engineered for improved soil-hiding ability and extra bulk and cover. By altering fiber sizes and reducing the area where dirt may adhere, Ultron VIP nylon's innovative blend of deniers and cross sections inhibits soil from sticking and makes it easier to remove. For all contract interiors, specify carpet with Ultron VIP nylon.

Carpet made with Ultron nylon stay newer looking two-to-three times longer than unprotected carpet.

Rigorous independent tests of 800,000 foot traffics reveal that carpet made of Ultron VIP nylon with 3M™ Commercial Carpet Protector shows less soiling than unprotected carpet. Carpets of Ultron VIP nylon also have demonstrated resistance to crushing, excellent restorability and outstanding resistance to abrasion and piling.

### ***Performance:***

\* Testing measures a lower degree of soiling in loop pile carpets with Ultron VIP nylon, even after 800,000 traffics.

\* Ultron VIP nylon is available in both staple and continuous filament (BCF) enabling you to combine performance with up-to-the-minute carpet colors, textures, and styles.

\* Ultron VIP nylon further resists soiling with 3M™ Commercial Carpet Protector,\* powerful protection against dry soil as well as water- and oil-based soils – a combination many other ordinary topical applications don't offer. Liquids tend to bead up and dirt doesn't cling to the fiber surface, making routine maintenance simple.

\* Carpet made with Ultron VIP nylon is clearly more beautiful. Colors are indisputably rich and vibrant. And Ultron VIP has been selected by designers as having the most wool-like luster in the industry.

\* Ultron VIP uses a low-soiling combination of delta and trilobal fiber cross-sections. Its unique shape decreases the surface area to which dirt may cling. And, this technology improves the carpet's bulk for better appearance and desirably firmer hand while it provides unsurpassed low-soiling performance.

\* Delta and trilobal cross-sections allow Ultron VIP nylon to refract light. As a result, carpet made with Ultron VIP nylon appears more colorful, more vibrant, more deeply saturated.

\* And, Ultron VIP nylon has been proven to be colorfast against sunlight and atmospheric fading.
